

Ex No : 9 Virtual Machine migration using Xen Server

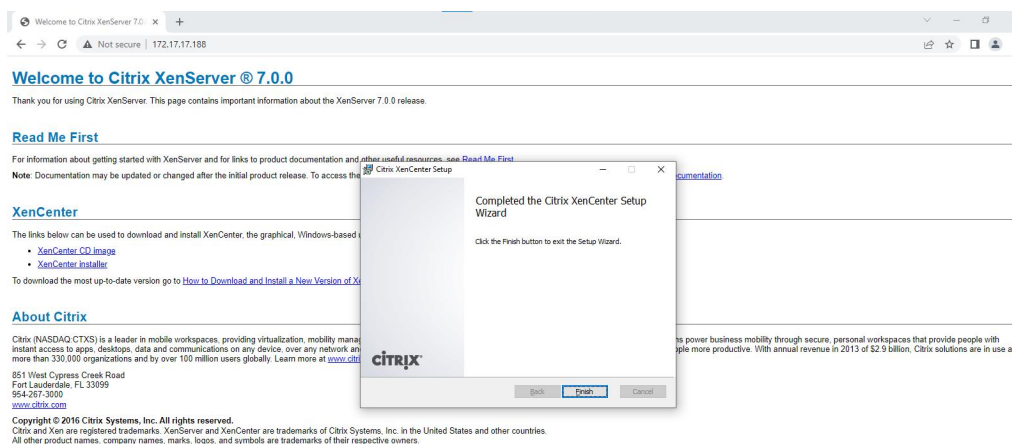

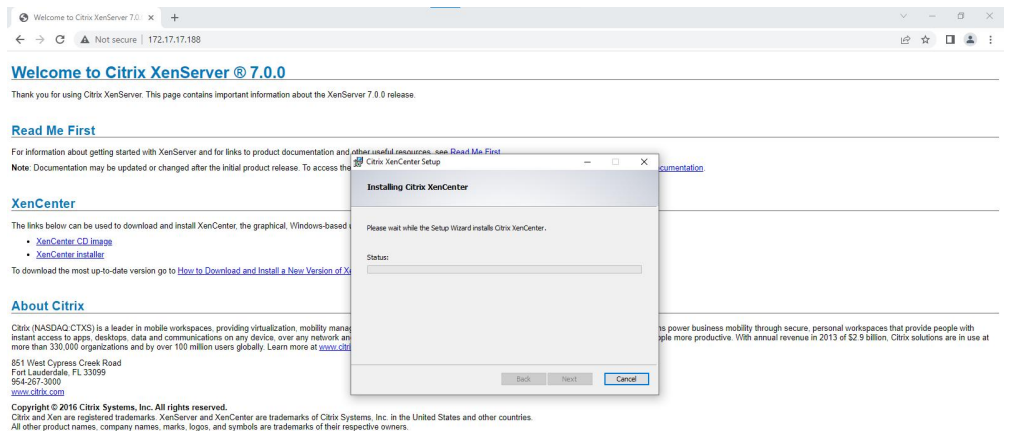

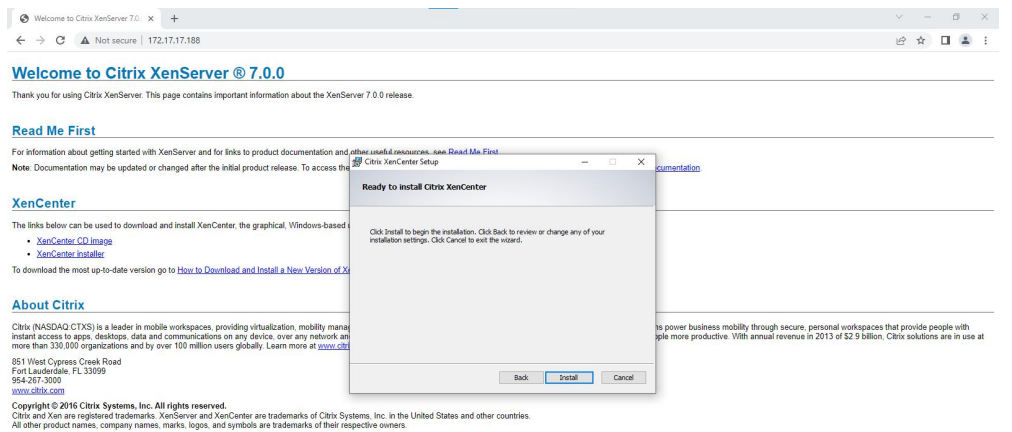

Aim :

To create a virtual machine and migrate it from one server to another using Xen Server.

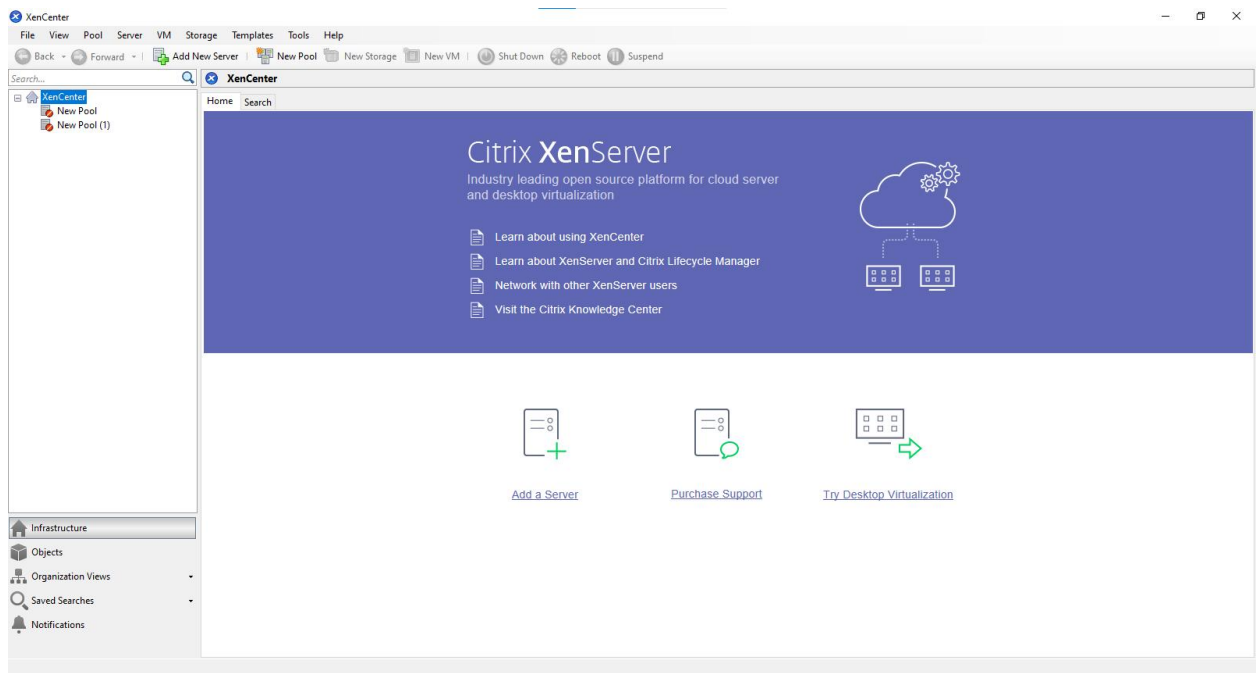

Procedure and Screenshot :

1. Open Xen Server webpage and download the installer and begin the installation process

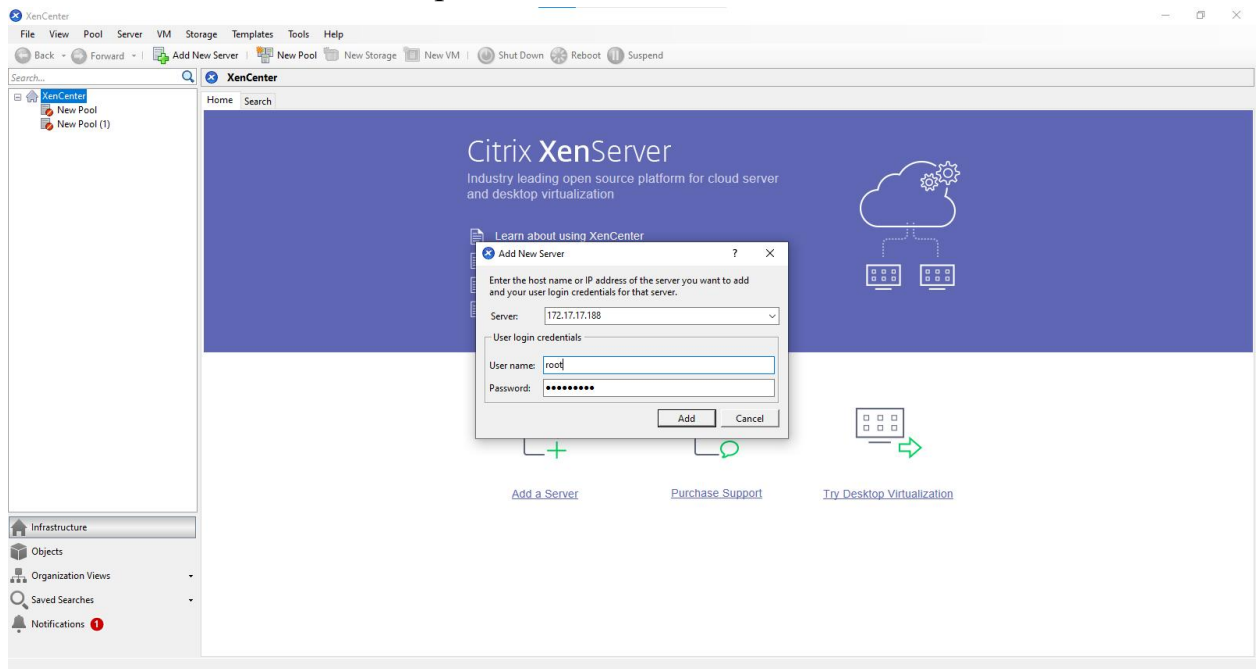

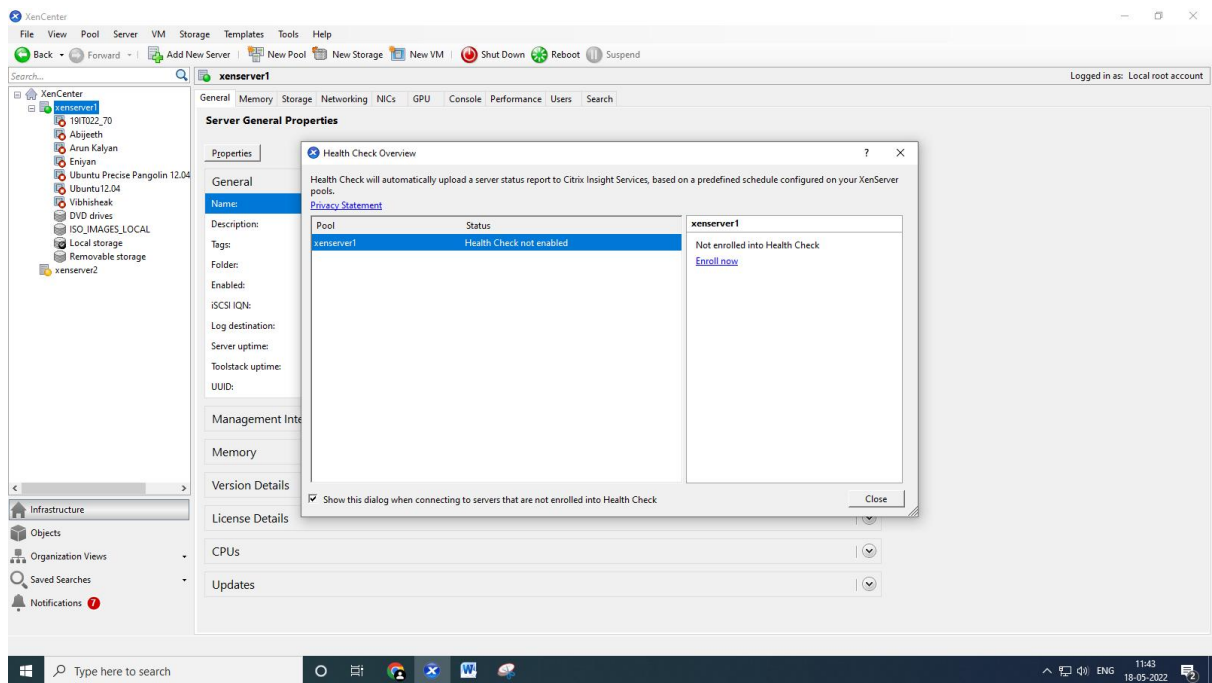

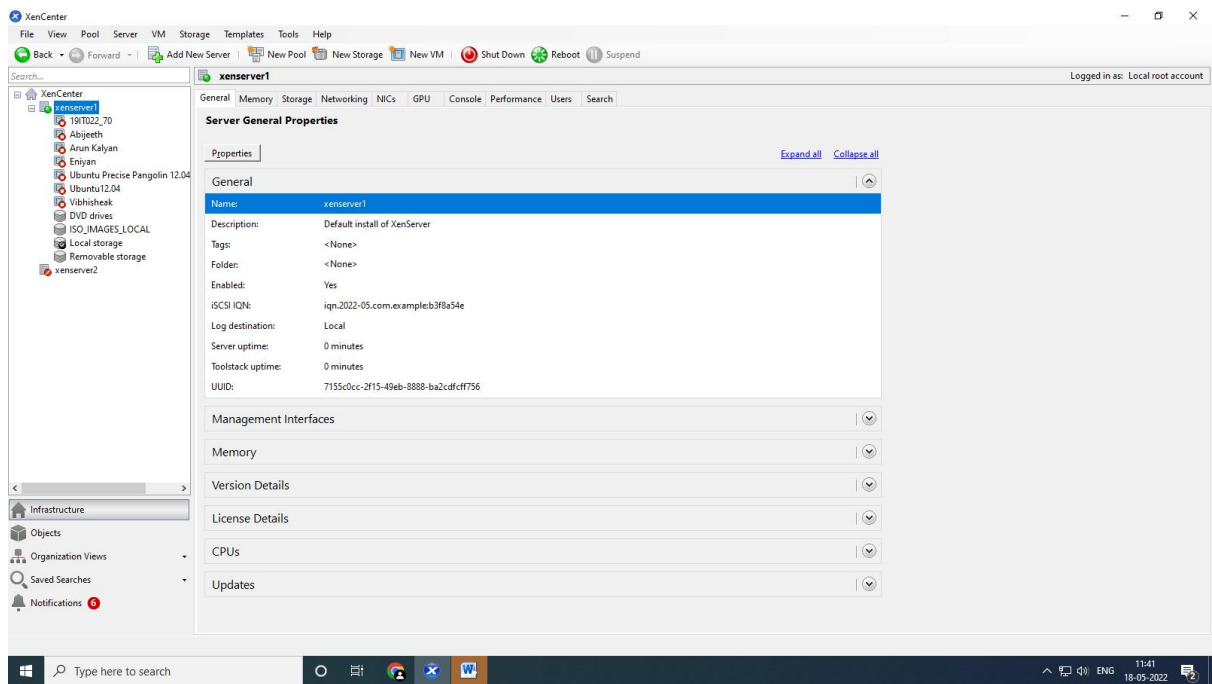

2. Open Citrix Xen Server and create a server

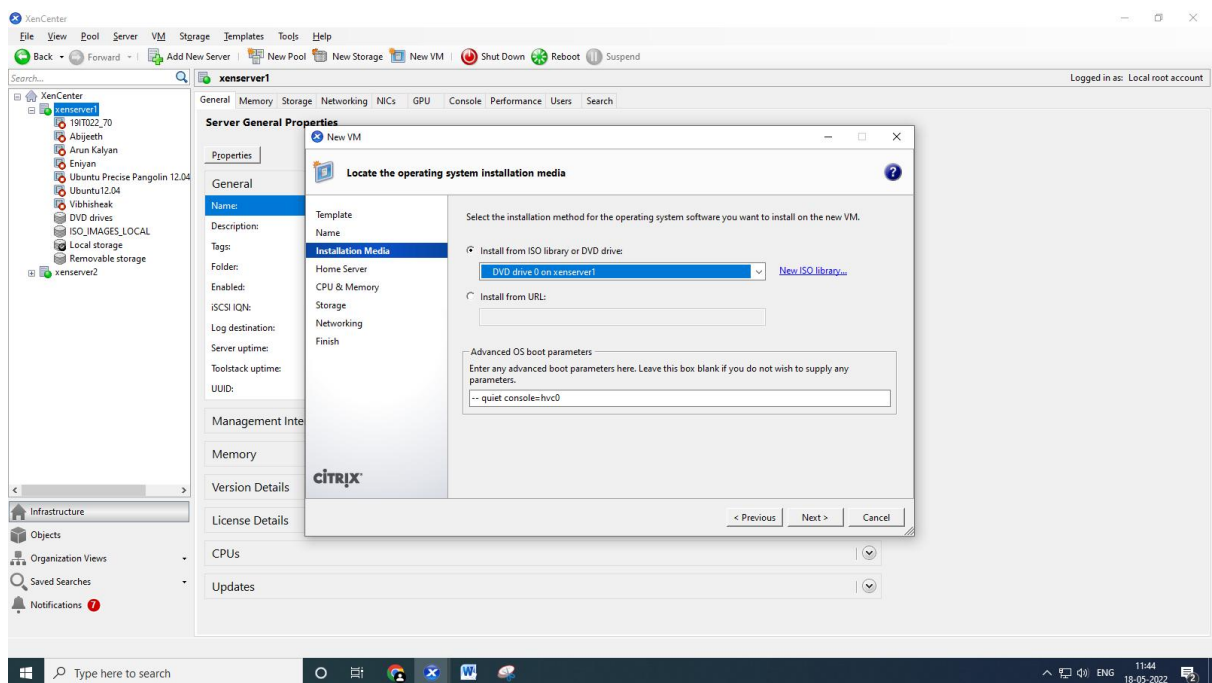

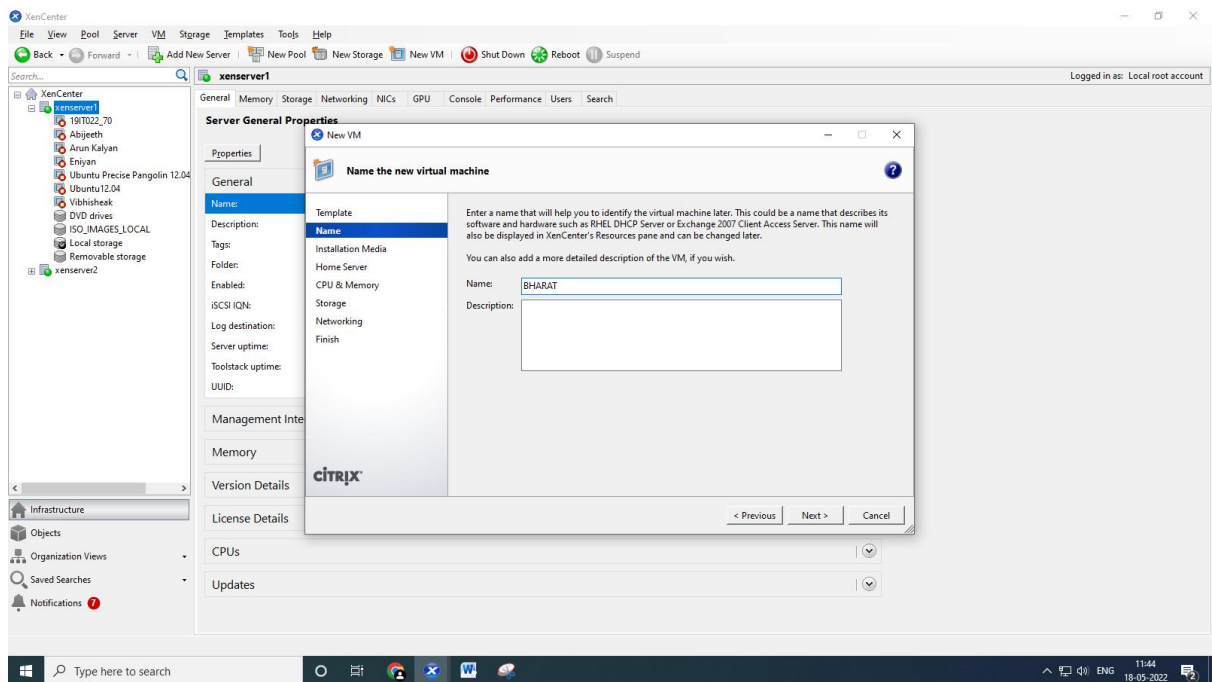

3. Enter the IP address and the password

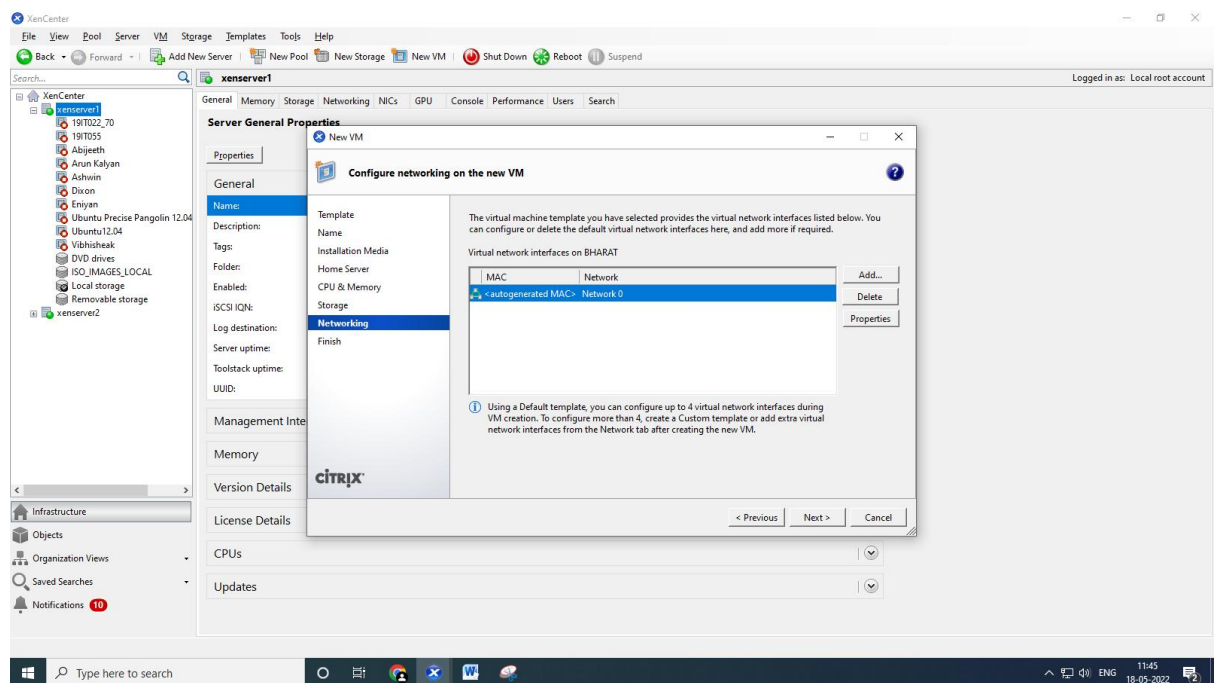

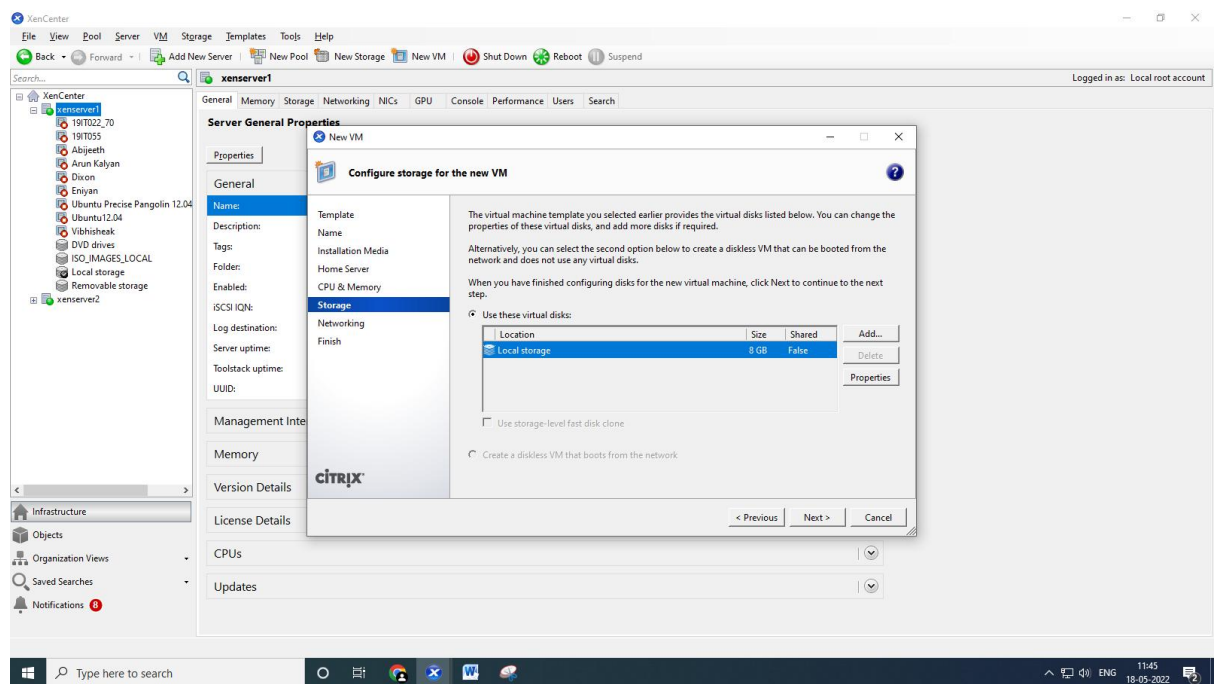

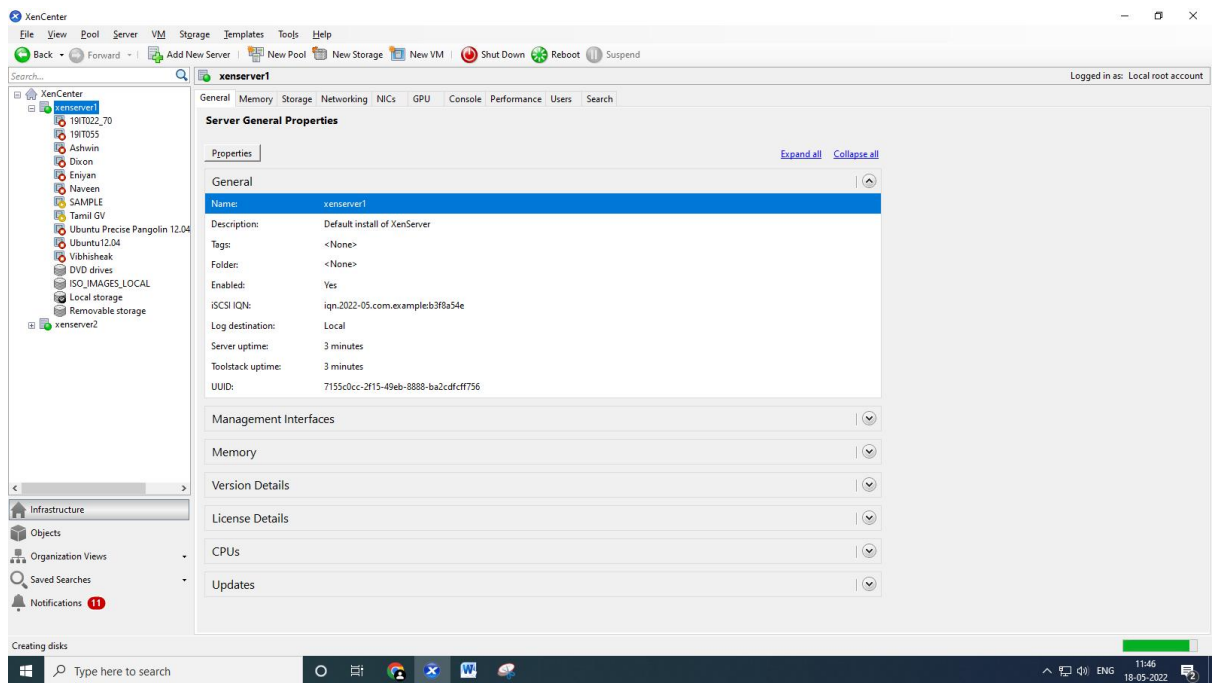

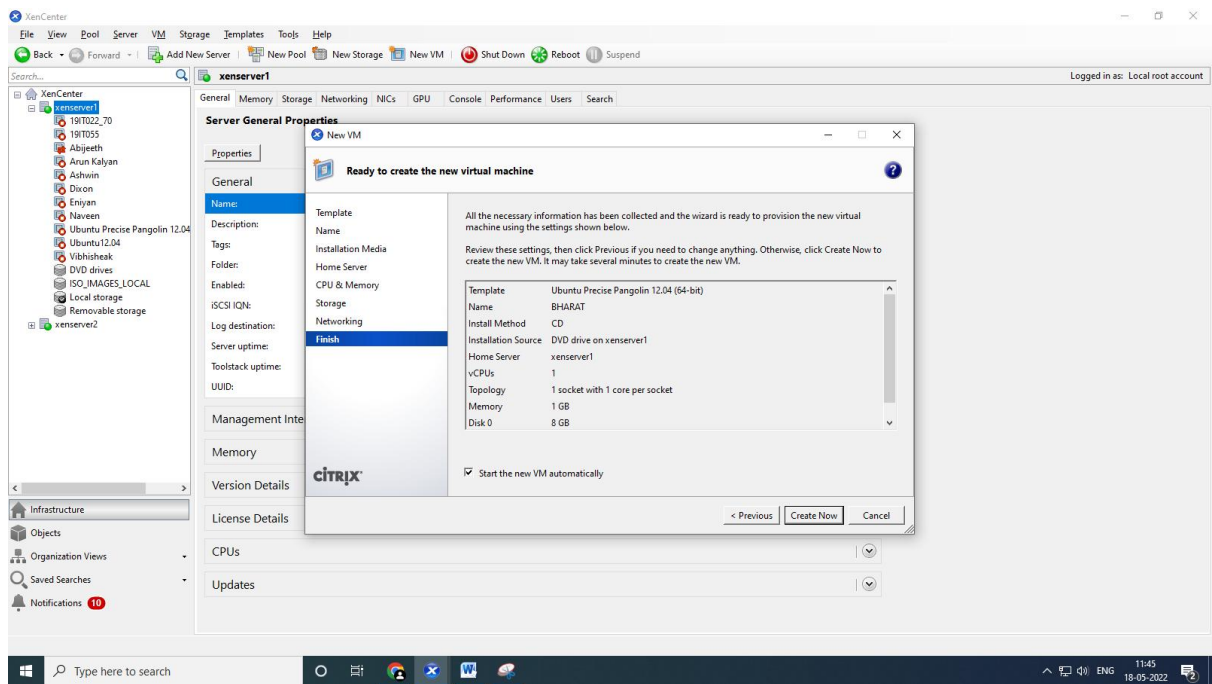

4. Create a new VM by selecting the OS and other configurations

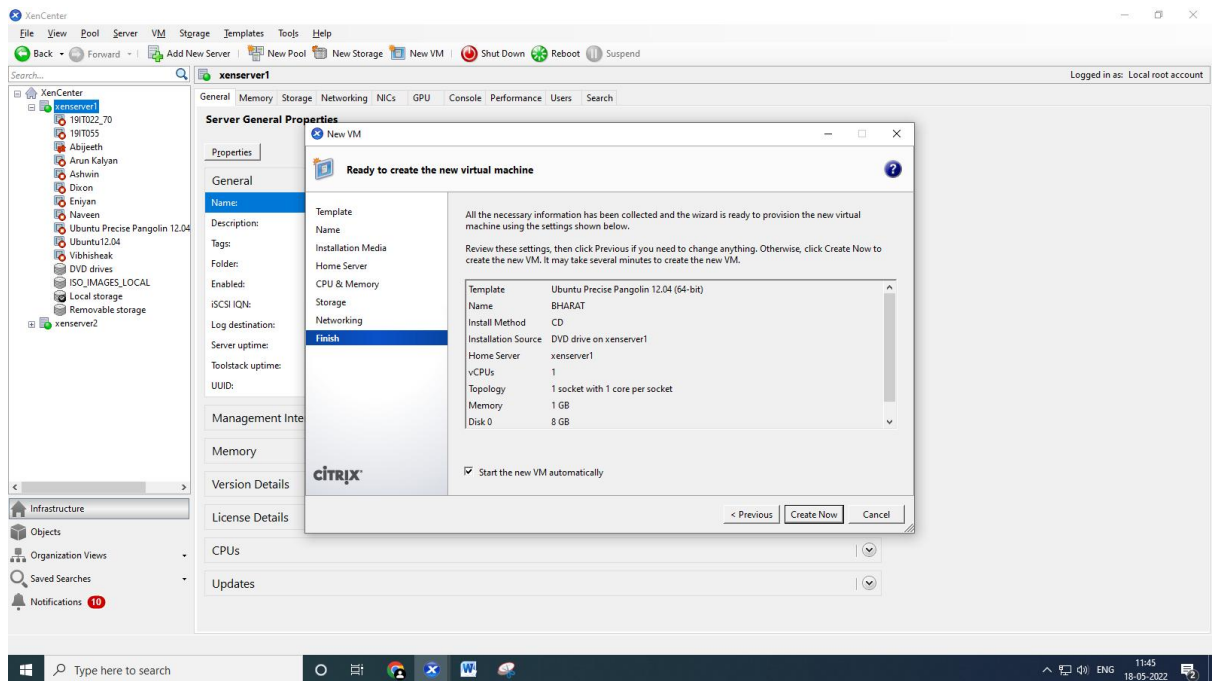

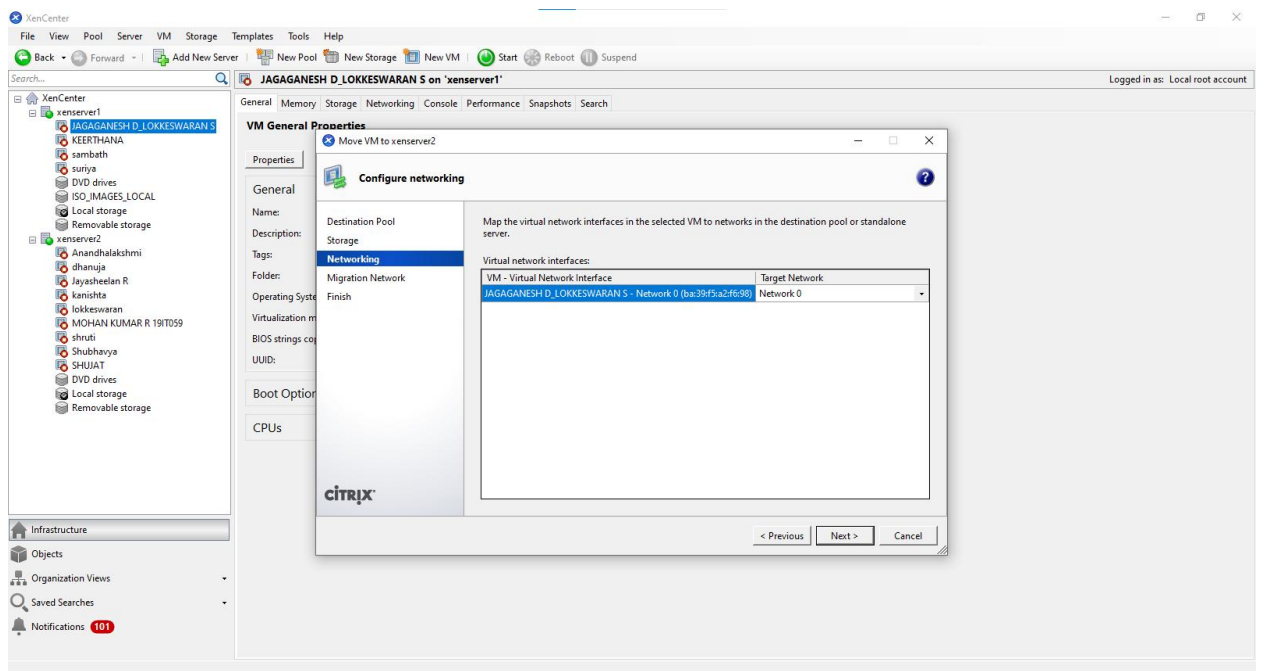

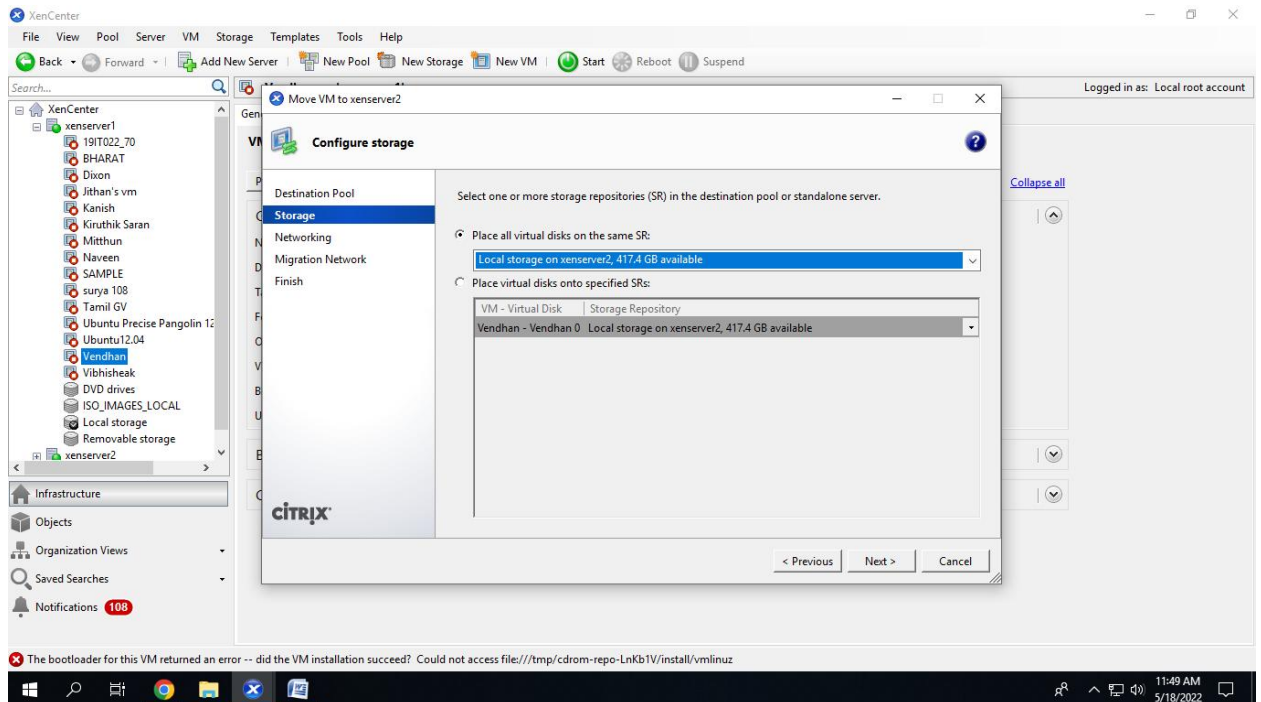

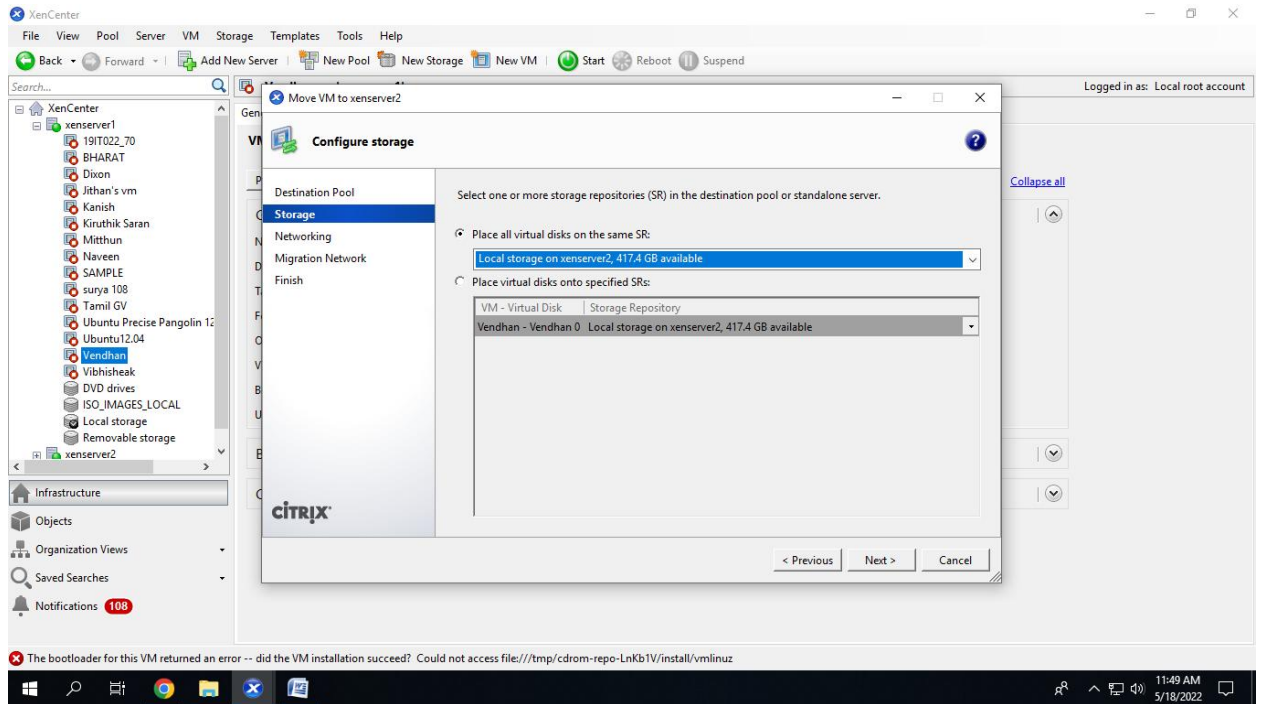

5. Create another VM in the same method

6. Right click the desired VM and move it to the destination server

7. The VM has been moved successfully

Result :

Hence the experiment was completed and the result is verified.
